(54) Title: AN INFORMATION BAND

(57) Abstract: The invention refers to an information band (1) for application around preferably the wrist of a wearer and containing actual information about the actual person and which consists of a clip (2) and the band (3). The clip (2) comprises a lid part (5) pivotably connected to an bottom part (4), at least one squeezing means (6) being formed within and between said parts (4, 5) and said parts (4, 5) are intended to fix the band (3) into position by aid of a strong squeezing force by a lockable, snappable co-operation between said parts in a locking device during application of said band, whereby when loosening of the clip (2) from its fixing position a two-handed grip is required thanks to the strong squeezing force of said squeezing means (6) after said snapping-together of the parts (4, 5) to each other.
